

Level One & Level Two Implant A-Z Overview

April 03-04, 2020

New York, USA

Lecturer TIZPIA:

DR. PETRUNGARO, DDS, M, FICD, FACD, DICOI

Noris Medical Inc.

4775 S Durango Blvd Suite 107 LV NV 89147

Jazminp@norismedical.com | T. 702-722-3027 | norismedical.com

IMMEDIATE RESTORATION COURSE OVERVIEW

Part 1

April 03 | 8:30am-12:00pm

- Diagnosis and Treatment Planning
- Atraumatic Extraction/Ridge Preservation
- Soft Tissue Grafting/In Conjunction with Minimally Invasive Implant Placement
- Ideal Surgical Guides for Immediate Placement and Restoration to Ensure Esthetic Results
- Initial Stability of Dental Implants at Placement
- Anterior Implant Esthetics
- Minimally Invasive Implant Placement
- Minimally Invasive Bone Grafting
- Advanced Implant Esthetics
- Immediate Implant Restoration
- Multiple Tooth Implant Site Procedures
- Esthetics and Immediate Loading
- Immediate Loading in Partially and Fully Edentulous Arches
- Immediate Loading Maxillary and Mandibular Arches Simultaneously

Learning Objectives

- To provide a curriculum that is unmatched in the private Dental Education realm.
- To help Clinicians incorporate contemporary surgical and restorative principles into their practices.
- To educate participants and allow them to have a state of the art course with materials and aides to maximize their learning experience.
- To build their learning experience through conventional, well established principles, and to incorporate modern, state of the art procedures into the learning experience.
- To provide a support system for our students to help them become successful with the incorporation of these techniques into their practices.

ALL-ON-X TREATMENT CONCEPT SURGICAL & PROSTHETIC COURSE

Part 1

April 03 | 1:00pm-4:00pm

Immediate loading and restoration protocols utilizing the All-On-X Treatment Concept are becoming more prevalent in the contemporary Implant practice. The All-On-X Treatment Concept for complete rehabilitation of the edentulous dentition has gained popularity over the last several years. Additionally, this Treatment Concept has become a successful modality for treatment of the “terminal dentition”. The All-On-X Treatment Concept is also an option with failing Implant cases that are not candidates for bone grafting.

- Course Introduction and Review Procedure
- Diagnosis, Treatment Planning, Case Set Up Records
- Case Presentation
- Surgical Procedure
- Pre-surgical Management
- Adequate Bone Reduction
- Surgical Guide Management/Construction
- Angled Implant Placement
- Post –Surgical Management

ALL-ON-X TREATMENT CONCEPT SURGICAL & PROSTHETIC COURSE

Part 2

April 04 | 8:30am-10:30am

- Multi-abutment Selection and Placement at
- Initial Surgery
- Immediate Denture Conversion
- Maintenance Phase
- Final Prosthetic Phase
- Long Term Success
- Complications/Management
- Rescue Implant Procedures for Long-Term
- Case Success

Learning Objectives

- Identify Potential Patients in Your Practice
- Develop a “Surgical-Prosthetic Blueprint”
- Perform Surgery that is Prosthetically Driven
- Fabricate and Deliver a Prosthesis this is:
 - Structurally Sound
 - Esthetically Pleasing
 - Easily Maintained
- Accomplish the Above in a Manner that is:
Predictable Stress-free, Profitable

ZYGOMATIC COURSE ALL-ON-X TREATMENT CONCEPT

Part 2

April 04 | 10:30am-12:00pm • 1:00pm-4:00pm

In this extensive course, the placement and usage of Zygomatic Implants will be covered in conjunction with the All-On-X Treatment Concept. These Implants are revolutionary in the treatment of handicapped patients such as advanced bone loss, previously failed treatments in the upper jaw, and the inability to perform extensive bone grafting procedures to achieve desired results. The All-On-X Treatment Concept for complete rehabilitation of the edentulous dentition has gained popularity over the last several years. Additionally, this Treatment concept has become a successful modality for treatment of the “terminal dentition”. The All-On-X Treatment concept is also an option with failing Implant cases that are not candidates for bone grafting, this is even more critical for the severely resorbed edentulous maxillae, where the incorporation of Zygomatic Implants at the initial surgical procedure are becoming more accepted.

- Learn to appropriately diagnose and Treatment plan the atrophic posterior Maxillae.
- Learn when to divert to a Zygomatic Implant in the surgical phase of a Maxillary
- All-On-X Treatment Concept surgery.
- Learn the appropriate anatomical structures and surgical approach for the placement of Zygomatic Implants.
- Learn prosthetically driven Zygomatic Implant placement.
- Learn how to use Zygomatic Implants as a ‘rescue Implant’ for the re-treatment of failing Maxillary Implant reconstructions.
- Learn when to use Zygomatic Implants for uni-lateral maxillary reconstruction.

Speaker

Dr. Paul Petrunaro

Dr. Petrunaro is recognized around the world for his diversified seminars and lectures on advanced periodontal, prosthetic and implant interrelationships, bone re-generation and esthetic tissue formation, the All-on-4® Treatment Concept “surgical protocol”, All-on-6 48 hour Nano-Ceramic Teeth, Zygomatic “Rescue” Implants, the treatment of failing implants, and the reconstruction of previously failed implant cases, immediate restoration of dental implants and the use of platelet rich plasma in bone grafting throughout the US, Europe, Canada, Asia, Australia, South America, Central America, and Israel. In addition, he has authored numerous articles covering subjects such as cosmetic bone grafting and esthetic implant procedures.
